April 2008

### REACH Directive

Dear Sir or Madam,

On 1st June, 2007, the following Directive entered into force:

The European Parliament and Council DIRECTIVE (EC) No 1907/2006 dated December 18, 2006 regarding the new Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). It amends the former legislative 1999/45/EC and replaces the Council Directive (EWC) No 793/93, the Commission Directive (EC) No 1488/94, the Council Directive 76/769/EWG as well as the Commission Directives 91/155/EWC, 93/67/EWC, 93/105/EC and 2000/21/EC.

Stat-X supplies the electronics industry with numerous and diverse products in order to avoid and prevent electrostatic discharge. These include work gloves and clothing, measuring and testing equipment, packaging made of plastic sheeting, foams and other materials, as well as flooring, workbench mats, tools, workbenches and thermoplastic semi-finished and manufactured products.

Due to the complex requirements detailed in this legislation, we are currently reviewing all of our products with our suppliers in order to assess how and to what degree Stat-X and our products are affected by the directives.

Please feel free to contact us with any further questions you may have.

Thank you for your continuing patronage,

Klaus Höllwarth  
General Manager
