

Statement on Environmental Protection as well as Safety and Health at Work

Dear Customer,

The Stat-X Group is committed to providing customers with the highest quality products and aspires to the highest standards of social responsibility and ethical conduct.

Environment

The EU has some of the world's highest environmental standards. Water, air pollution and chemicals are among people's top environmental concerns. To safeguard people from environment-related pressures and risks to health and wellbeing, EU policy aims to guarantee safe drinking water, improve air quality, reduce noise and eliminate the effects of harmful chemicals.

Safety and Health at Work

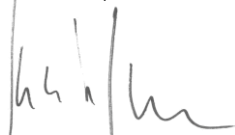

The European Framework Directive on Safety and Health at Work (Directive 89/391 EEC) adopted in 1989 guarantees minimum safety and health requirements throughout Europe. It establishes general principles for managing safety and health, such as responsibility of the employer, rights/duties of workers, using risk assessments to continuously improve company processes, workplace health and safety representation.

The Stat-X Group is committed to comply with all relevant European as well as national laws and regulations concerning the environmental protection as well as safety and health care at work.

We assume that this statement contains the desired information and ask for your understanding that we cannot process special questionnaires, lists or forms on this subject.

No assurances in the legal sense may be derived from the above statements.
