SEMINAR SERVICES

All prices include the seminar documents and a confirmation of participation or, after a successful examination, a certificate of participation, a business lunch, as well as drinks and snacks during breaks. **The overnight stays are not part of the seminar price.**

TRAINING HIGHLIGHTS

Supplier control is also an important issue in ESD protection. Since most ESD properties are not visually recognizable, material qualification and verification must be carried out carefully. Especially packaging and the apparent gaps in the long-term reliability of suppliers often cause deviations in the audit. Does it have to be like this? In the practical part, on the 2nd day of the training, the long-term topic of testing is dealt with in detail: "How exactly and how often do you have to test?"

Basics

The content of the 3-stage training is based on the standards of the IEC 61340 series and the RL1011 "Recommendation for the structured training of ESD specialists" of the working group of the ESD Forum, presented at the ESD Forum 2009 in Munich and the ESD Workshop 2010 in Frankfurt. The seminars ESD Assistant (June 13th), ESD Responsible/Technician (June 14th) and ESD Coordinator (June 15th) build on each other.
